Basil

Unlock data, unleash potential

Connect existing systems

Imagine the possibilities if you had all the data you needed.

Basil integrates data from different sources, even outside your organization, to where it is needed. Instead of big bang IT projects, Basil will help you enhance proven processes, with reduced risk, lower cost and quicker results.

Let's build missing links to improve your processes.

Automate manual processes

Countless hours are wasted on manual data entry, file handling and repetitive communications.

Basil leverages existing data sources, even if they are difficult to access, to automate data flows.

Let's automate routine work, to free up people's time and minds.

Enrich business intelligence

Is your business sailing blind, or are there blind spots in your existing BI?

Basil builds BI dashboards, develops custom analyses or connects new sources to your existing applications.

Let's create new insights to improve your decision making.

Integration services

We move data to where it is needed.

- Realtime sync between any systems
- Specialized in hard-to-reach data (e.g. on-prem, no API, legacy formats...)

Infrastructure services

We deploy cloud services to store and exchange data.

- Data warehouses and tailored data marts
- API development to securely share data with others

Transformation services

We convert data into the right form.

- Mapping of heterogenous data from disparate sources into a single format
- Cleanup and validation

Analytical services

We turn data into information.

- Dashboard design and setup
- Development of metrics, KPIs and analytics

Why you'll like to work with us

When working with Basil, you skip the middlemen and deal directly with a lean team of dedicated experts. No nonsense, no surprises and straightforward pricing.

We won't reinvent the wheel and instead leverage our 10+ years of experience and accelerate projects using in-house technology, such as our Cilantro framework for remote data integration. Moreover, we eat our own dogfood: we run and maintain several products and projects built around our data integration solutions.

Enough about us, tell us about your data goals and challenges.
